

The Most Trusted Name in Test Strips

Denville, NJ (1 June, 2011) – Ron Schornstein, President and CEO of Acustrip, Inc. announced the development and availability of a unique fluid test that will identify glycol in automatic transmission fluid (ATF) in less than a minute.

The test is easily administered and the test key delineates 0%, 1%, 3% and 6% glycol content.

“The ATF / Glycol test is extremely well received in markets both domestically and internationally”, said Ron Schornstein, President of Acustrip. He added, “We have a product that addresses a growing problem in the automotive and commercial environment. With over 25 years in the specialty coolant and glycol test arena, we routinely create products that address the needs of business and consumers across a number of application channels.”

Certain sectors in the automotive industry are experiencing glycol contamination in ATF. Formerly, testing was both expensive and time consuming. The Acustrip product is economical, proven and fast.

Designated Part #711254, the product is available for immediate shipment, complete with a test key that can be customized to the user.

A 100% USA manufacturer, Acustrip distributes over 200 affordable test strips and kits globally.
